

Oscillators

Transpose and Detune

To set the pitch of an oscillator in musical terms (instead of thinking in Hz), synth.kitchen's oscillator modules have two additional parameters:

- transpose
- detune

Oscillators

Transpose

Transpose shifts the pitch of the oscillator by the given number of semitones.

Frequency	Transpose	Resulting Frequency
440	0	440
440	12	880
440	-12	220
220	12	440
