

# Using synth.kitchen

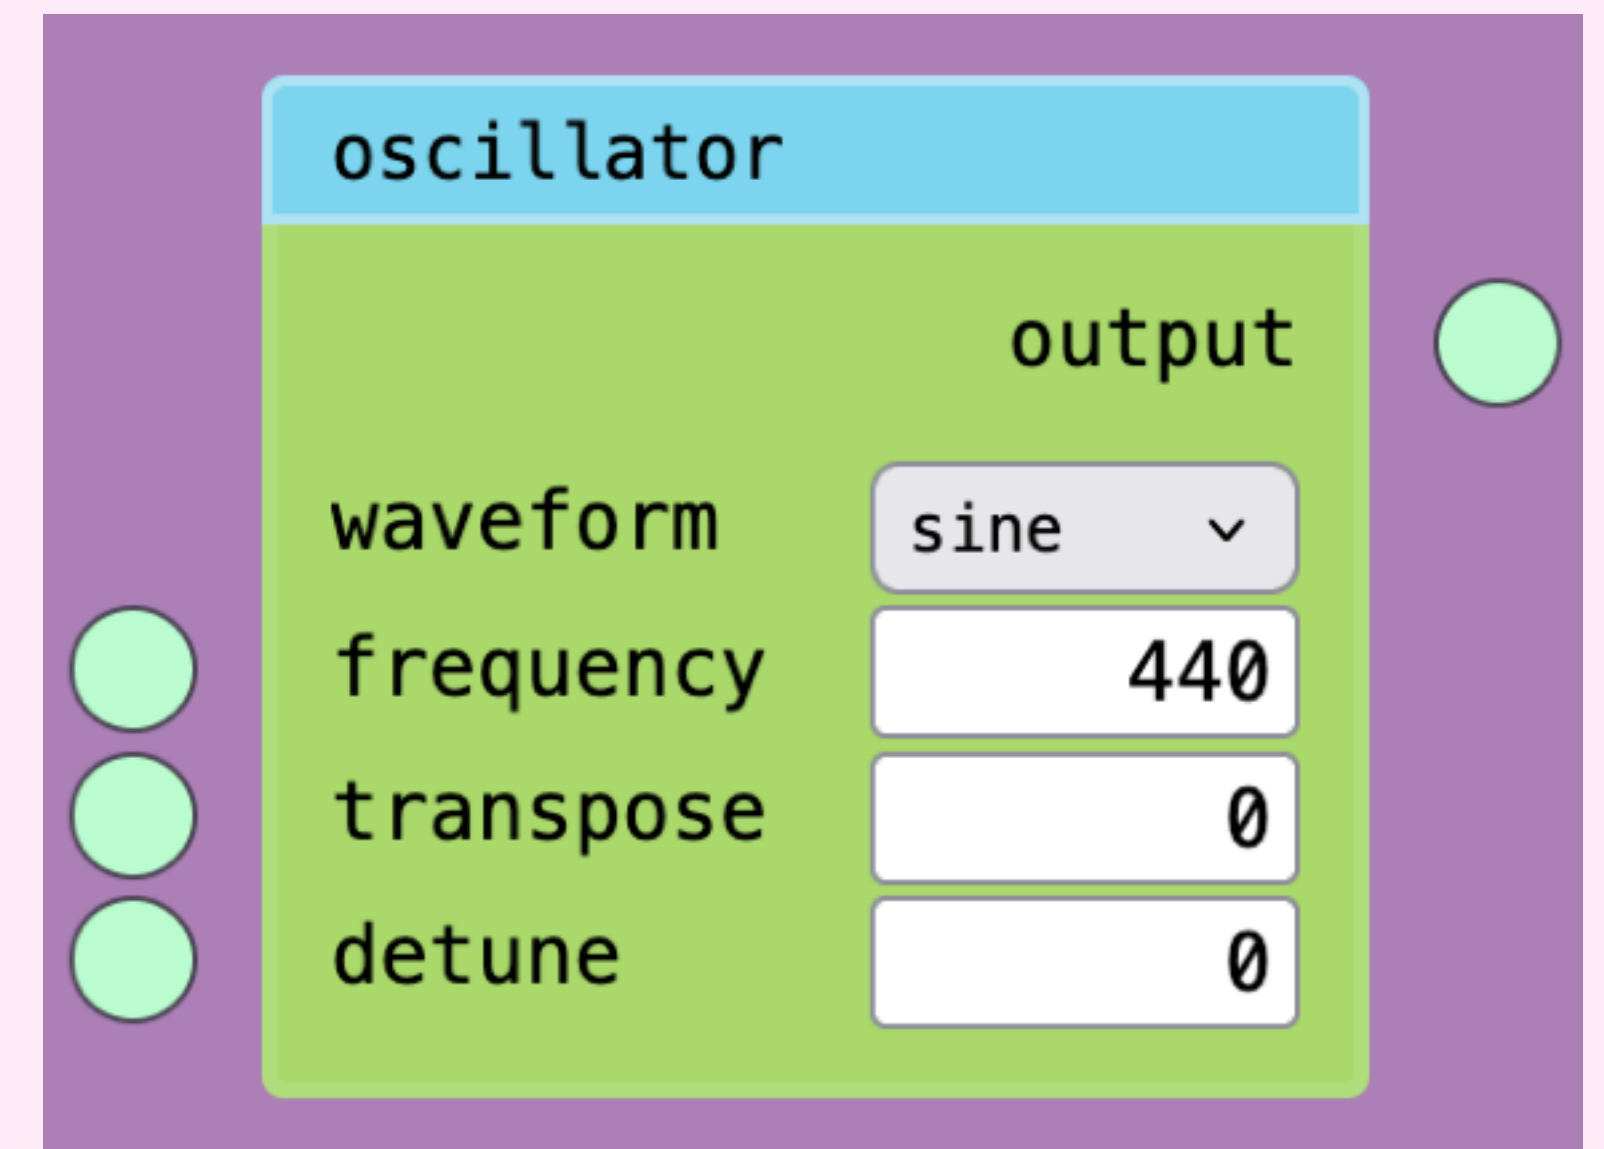

## Parameters

Most modules have parameters.

Parameters can be:

- options (waveform: sine/triangle/square/sawtooth)
- number (frequency, transpose, detune)

Number parameters can be controlled or modulated by connecting them to the outputs of other modules

# Using synth.kitchen

## Changing parameters

Number parameters can be changed by:

- Typing a new value and pressing Enter
- Pressing Up or Down arrow keys (+1 or -1)
- Pressing Shift + Up or Down arrow keys (x2 or /2)

Shift + Up or Down can be a quick way to get interesting and musical results!
